

## Introduction

1. The climate
  - Temperature
  - Precipitation
2. The topography
3. The geology

## Fuck

In this report, **we will** explore the various factors that influence *fluid dynamics* in glaciers and how they contribute to the formation and behaviour of these natural structures.

## Background

Glaciers as the one shown in Figure 1 will cease to exist if we don't take action soon!

我以后再也不会笑了

Figure 1: *Good* Emoji

## Maths

The equation  $Q = \rho Av + C$  defines the glacial flow rate.

The flow rate of a glacier is defined by the following equation:

$$Q = \rho Av + C$$

Total displaced soil by glacial flow:

$$7.32\beta + \sum_{i=0}^{\nabla} \frac{Q_i}{2}$$

$$v := \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix}$$

$$a \rightsquigarrow b$$

## Table

```
instance Monad ((->) e) where
  return = const
  a >>= f = \s -> f
```
